Résumé

Cybersecurity Consultant supporting organizations in strengthening
their security posture through vulnerability management, continuous
threat monitoring, and security assurance activities.
I have hands-on experience in vulnerability assessment and
penetration testing, helping identify, validate, and reduce risk across
networks, web applications, APIs, and cloud environments. My work
focuses on translating technical findings into actionable remediation,
prioritizing issues based on real-world exposure and business
impact, and improving security visibility through clear reporting and
KPIs.
I'm particularly interested in SOC operations and cloud security, and
I enjoy bridging offensive security insights with detection, triage, and
remediation processes to improve resilience end-to-end.

Expérience

HELO Solutions
Penetration Tester
septembre 2025 - janvier 2026 (5 mois)

Performed authorized penetration tests and security assessments across
network, web, and service scopes using industry-standard methodologies,
producing prioritized, risk-based findings with clear remediation guidance.
Executed end-to-end offensive assessments (reconnaissance, enumeration,
exploitation attempts, and post-exploitation validation where authorized) to
confirm real impact and feasible attack paths.
Translated technical findings into actionable recommendations for security and
engineering teams, supporting remediation planning and secure hardening.
Delivered high-quality reporting with evidence, impact analysis, and retesting
results to validate fixes and reduce residual risk.

Sodexo
External Security Analyst
mars 2025 - septembre 2025 (7 mois)

remote

As part of my role, I actively collaborated to enhance their cybersecurity posture through External Attack Surface Management (EASM) and Vulnerability Intelligence services. I conducted continuous asset discovery and monitoring to identify exposed and unmanaged IT assets across internet-facing environments. By leveraging automated reconnaissance tools and threat intelligence feeds, I provided with real-time visibility into potential vulnerabilities, misconfigurations, and emerging threats. I also delivered actionable reports that prioritized risks based on business impact, enabling timely remediation and reducing the overall attack surface. This proactive approach helped clients mitigate external threats before they could be exploited by adversaries.

TDS By Nomios ## Cyber, Network & Security Talent Profiler
Vulnerability Operation Center Analyst
janvier 2025 - juin 2025 (6 mois)
Tunisie

Designed and developed an External Attack Surface Management (EASM) platform to automate the discovery, inventory, and continuous monitoring of internet-facing assets, improving visibility over exposed infrastructure and reducing blind spots (including shadow IT).
Engineered the solution using Flask with a containerized architecture (Docker Compose), enabling modular deployment, scalable scanning workflows, and easier integration of new analysis components.
Implemented automated asset discovery and enrichment pipelines (DNS resolution, subdomain enumeration, service detection, technology fingerprinting), producing a structured asset inventory with ownership/context fields to support prioritization.
Integrated security analysis modules to detect high-risk exposures and misconfigurations (exposed services, weak security headers, unsafe endpoints, outdated components), correlating findings with asset criticality to reduce false positives and focus on actionable risk.
Built an interactive dashboard to centralize vulnerability and exposure insights, offering real-time monitoring views, risk scoring/prioritization, and exportable reporting to support remediation workflows and stakeholder communication.
Delivered a documentation package covering architecture, deployment, and operational usage, with a focus on proactive breach prevention through continuous external visibility and early detection of newly exposed assets.

TDS By Nomios ## Cyber, Network & Security Talent Profiler

VOC Analyst
juillet 2024 - septembre 2024 (3 mois)
Tunisie

Conducted a Vulnerability Operation Center (VOC) case study focusing on:
Attack Surface Management (ASM), Offensive security testing and performed
penetration testing and red teaming operations, gaining hands-on experience
in offensive security techniques and attack vectors.
- Collaborated with a dynamic team to identify and mitigate vulnerabilities in
real-time, contributing to overall security posture enhancement.
- Participated in risk assessment and vulnerability analysis, learning to identify
threats proactively and improving incident response strategies.
- Worked closely with my supervisor to understand the workflow of a VOC,
enhancing my skills in risk management, security operations, and vulnerability
assessment.

Vision Tunisie
Penetration Tester
juin 2023 - septembre 2023 (4 mois)
Gouvernorat Sousse, Tunisie

During my internship, I actively participated in penetration testing exercises
and network security administration tasks. This experience allowed me to
develop practical skills in identifying and addressing vulnerabilities within
networks while also gaining insights into network administration practices.
